

NEAR-MAXIMUM ENTROPY MODELS FOR BINARY NEURAL REPRESENTATIONS OF NATURAL IMAGES

MATTHIAS BETHGE AND PHILIPP BERENS (W46)

What is the influence of pairwise correlations on large networks of neurons?

Low dimensional observations:
often well described with
pairwise statistics

Full system: ?

Near-MaxEnt Model

Dichotomized
Gaussian distribution:

$$\mathbf{z} \sim \mathcal{N}(\gamma, \Lambda)$$

$$s_i = \text{sgn}(z_i)$$

Parameter estimation
and sampling are easy.

$$\gamma_i = \Phi^{-1} \left(\frac{\mu_i + 1}{2} \right)$$

$$\Sigma_{ij} - 4\Psi(\gamma_i, \gamma_j, \Lambda_{ij}) = 0$$

Model has entropy
close to the maximum.

Binarized Natural Images

Small network:
Pairwise correlations
sufficient

Large network:
Pairwise correlations fail
